

SWIFTYBAGGER

Horizontal bagger
for pre-made pouches

WEIGHPACK
SYSTEMS INC.

The robust Swifty Bagger is engineered to automatically open, fill and seal pre-made pouches and operate on a variety of bag styles, including pillow, stand-up, gusseted and quad bags, with a zipper enclosure or a carry handle.

Designed for performance, serviceability, cleanability and ease of use, the Swifty Bagger offers the following features:

Construction:

The Swifty includes a heavy duty robust frame with stainless steel sheet metal.

Design:

It's unique straight flow design makes accessibility of parts easy and allows for the operator to see the entire filling process from the front of the machine without blind spots.

Cleaning / Sanitation:

Simply open the front clear lexan doors of the Swifty and access all bag filling components and clean in a matter of minutes with only one person.

Servicing:

Designed for food safety, all cams are located in the back of the Swifty and the bag filling assembly is in the front. Product will never touch heavy duty, mechanics as they are separated. A service technician does not require an assistant when adjusting the machine as all the mechanics are accessible for one person.

Bag Feeding:

Easy to adjust bag magazine ensures that pre-made bags enter the Swifty perfectly square, resulting in consistent output and perfect seals.

Integration:

The Swifty Bagger easily integrates with any auxiliary filling machines including our PrimoCombi multi-head weigher, PrimoLinear net weigher and Star Auger for powders.
